

The City of Elk Run Heights asks for the cooperation of all water customers on **Tuesday, October 27th, 2026**, to conduct a water main flushing program. On Tuesday, October 27th, 2026, the water mains will be flushed through the entire city of Elk Run Heights.

The water may be brownish color during and immediately after the flushing. Customers are urged not to plan a washday during the day of October 27th, 2026. The discolored water is bacterially safe. The discoloration is caused by accumulation of minerals on the inside of the water mains. A periodic flushing cleans the mains and helps avoid discolored water problems during normal operations.
